

Included in the package

--> Rear Side Splitters (Pair)

--> 8 X Screws

We highly recommend having your products installed by a specialist.

Installation

Resources needed!

Screwdriver - Gloves - Cloth

At least two people

Around 30 min

Cleaning

Clean the car's surface and the rear side splitters with cleaner. Let the surfaces dry.

Aligning

Align the rear side splitter's edge with the bumper's edge that is near the wheel and attach the rest of the splitter's surface to the bumper, to find the right place for the product to be installed.

Attaching

Carefully place the side splitter on the car and attach the screws to their contact points. Screw the bolts while holding the rear side splitter to the right place.

We recommend:

- ✓ Using 4 screws at each side. The screws should be equally distanced from each other.
- ✓ The first screws at each side of the side splitter should not be more than 5cm away from the edge of the product.

Repeat

Repeat the steps for the other rear side splitter.

Vehicle Use

The vehicle is now ready to be used.
